

Subject

Paris MOU Concentrated Inspection Campaign on  
Tanker Damage Stability

# **ClassNK**

## ***Technical Information***

No. TEC-0823

Date 10 August 2010

To whom it may concern

The Paris MOU is planning to conduct the following PSC Concentrated Inspection Campaign (CIC) in 2010.

Items of Concentrated Inspection: Damage stability of oil tankers, chemical tankers and gas carriers

Campaign period: From 1 September to 30 November 2010

In practice, the Concentrated Inspection Campaign will focus on verifying the stability information book and other applicable documentation in more detail for compliance with relevant regulations.

# Press release

27 July 2010

## **TANKERS INSPECTED FOR DAMAGE STABILITY BY PARIS MOU.**

**The Paris Memorandum on Port State Control will start a Concentrated Inspection Campaign (CIC) to verify correct damage stability on oil tankers, chemical tankers and gas carriers. This inspection campaign will last for 3 months, starting on 1 September and ending on 30 November 2010.**

The reasons for this CIC include that inspections showed tankers frequently sailing when not complying with damage stability requirements or had no means of assessing damage stability or were sailing in a loading condition not covered by the approved stability book.

In practice the CIC will mean that during every port State control inspection of a tanker within the Paris MoU region, the stability information book and other applicable documentation shall be verified in more detail for compliance with relevant regulations.

Port State Control Officers (PSCOs) shall use a list of 9 selected items to verify critical areas for tanker stability. The questionnaire will be published on the website of Paris MoU.

A special training programme was organized to prepare PSCOs for the campaign.

When deficiencies are found, actions by the port State may vary from recording a deficiency to detention of the ship until deficiencies have been rectified.

In case of detention, publication in the monthly list of detentions available on the Paris MoU web page will take place.

The results of the campaign will be analysed and findings will be presented to the governing bodies of the MoU for submission to the IMO.

### Notes to editors:

Port State Control is a check on visiting foreign ships to see that they comply with international rules on safety, pollution prevention and seafarers living and working conditions. It is a means of enforcing compliance where the owner and flag State have failed in their responsibility to implement or ensure compliance. The port State can require defects to be put right, and detain the ship for this purpose if necessary. It is therefore also a port State's defence against visiting substandard shipping.

Regional Port State Control was initiated in 1982 when fourteen European countries agreed to co-ordinate their port State inspection effort under a voluntary agreement known as the Paris Memorandum of Understanding on Port State Control (Paris MoU). Current membership includes 27 countries. The European Commission, although not a signatory to the Paris MoU, is also a member of the Committee.

At least once a year the inspections focus on a certain area of concern or when new requirements enter into force. In the fall of 2011 the inspection campaign will be aimed at verifying that ships are in compliance with the requirements for structural safety and the international Convention on Load Lines.

Inspection reports are recorded on a central database SIRENaC located in St Malo - France, available for search and daily updating by MoU member countries. Inspection results can be viewed on the Paris MoU public website and are also provided to the Equasis public database.

The Secretariat of the MoU is provided by the Netherlands Ministry of Transport, Public works and Water Management and located in The Hague.

## PARIS MOU CIC ON TANKER DAMAGE STABILITY

### TANKER DAMAGE STABILITY QUESTIONNAIRE

<b>Name</b>	
<b>IMO Number</b>	
<b>Type: Gas, Chemical, Oil</b>	

No	Question	Yes	No	N/A
1	Does the ship have an approved stability information book (SIB)?			
2	Is the SIB written in a language understood by the master?			
3	Does the approved stability information cover damage conditions?			
4	Can the master demonstrate that the ship is normally loaded in accordance with the SIB?			
5	Has the master verified an alternate loading condition by written authority from flag/class?			
6	Has the master verified an alternate loading condition by assessing loaded condition against critical damage KG data, included in the approved stability information?			
7	Is there an on-board stability computer program that includes damage stability?			
8	Has the master verified an alternate loading condition by using the on-board stability computer program for carrying out damage stability checks?			
9	Was the ship detained as a result of this CIC?
